Natural Resources of Sri Lanka

Rocks

Land of Sri Lanka consist of Igneous, Sedimentary, and Metamorphic rocks. These rocks are used for many purposes since past.

Soil of Sri Lanka

Soil is formed by weathering of parent rock and decomposition of animal and plant matter. Factors such as climate, parent rock, vegetation cover and slope land areas are important in the formation of soil.

Read the 23, 24, 25, 26 pages of your text book and answer the questions given below.

01. List the main type of rocks and briefly explain the utilization with the examples.
