## Web designing using Multimedia

### Web Designing Software

There are web designing softwares which facilitate web designing quicker and more attractive.

There are various types of web designing softwares.

Ex:-

1. Web authoring tools  
ex:- Kompozer, Ckeditor, Bluegriffon
2. Content management systems  
ex:- Joomla, Word press, Drupal

There are two types of web sites according to the nature of its content.

1. Static web sites
2. Dynamic web sites

- (1). Compare the differences between static web sites and dynamic web sites.
- (2). Persons of the web development team is responsible for creating and maintaining a web site. Name the persons of a web development team and state the role of them.
- (3). There are several requirements a web publisher should fulfill in publication of a web site. Write and explain them.
- (4). Regular maintenance is an essential factor for the success of a web site. What are the factors that should be considered when maintaining a web site?
- (5). Show the summary of website designing and development process using a diagram.
