Lesson 3 - Major Types of Agricultural Land Utilization in the World.

Plantation Agriculture.(39-43 pages)

- Presence of industrial features although it is a system of agriculture is a special feature.
- The Asian region occupies a prominent place in the cultivation of tea than other regions in the world.
- At present, 95% of the world's total natural rubber is produced in the South and South East Asian Countries.
- Natural rubber has faced issues in the market due to the competition from synthetic rubber.

Activities

1. Define what Plantation Agriculture is and provide examples.
2. Write four special characteristics of plantation agriculture.
3. Complete the table given below.

Crop	<u>Favorable</u> <u>Factors</u>	<u>Cultivating</u> <u>Countries</u>	<u>Products</u>	<u>Special</u> <u>Features</u>
<u>Tea</u>				
<u>Rubber</u>				

4. Mark and name the tea cultivating countries on a world map.

5. Mark and name the rubber cultivating countries on a world map.
