<b>Grade: 10</b>	<b>Translated by: Mr. M.A.L. Kumara Kg/Dehi Rajasinghe C.C.</b>

### Lesson 3.

## **Types of Agricultural Land Utilization in the World**

### **Livestock Farming (Text book-Pages from 43 - 46)**

- Livestock Farming is the most ancient form of land use in the world.
- Milk is one main food item that provides the protein requirements of the people in the world. Livestock farming holds a prominent place in commercial dairy farming in the world.
- The developed countries have acquired prominence in commercial dairy farming.
- Factors such as the availability of grasslands and water, skilled labour, market and the presence of modern technology have contributed a lot to the expansion of dairy farming.
- Expansion of the market for milk related products is a special feature of dairy farming.

**Activity.**

1) Complete the following table relating to the main animals and the benefits gained by rearing those animals under livestock farming.

<b>Main animals</b>	<b>Benefits gained by them</b>

2) Write 03 factors that have contributed for the development of dairy farming in the countries located in the temperate zone in the world.

3) Write 03 special characteristics of dairy farming and explain one of them with examples.

4) Mark and name the dairy farming countries on a model world map.
