

Covid-19 weekly School
Sabaragamuwa province

May 2nd week

The calculator

In an ordinary calculator the operations are performed in order that the keys have been pressed.

Example - $5 + 3 \times 2 =$

$$8 \times 2 = 16$$

But this is wrong according to the "BODMAS" rule .

when we enter the above data in scientific calculator in the same order , the operations are performed according to the accepted order of performing mathematical operations .

example - $5 + 3 \times 2 =$

$$5 + 6 = 11$$

This is correct according to the "BODMAS" rule.

Study the example in your text book and answer the following exercises .

- Exercise 11.1
- Exercise 11.2
- Exercise 11.3
- Exercise 11.4
