

Covid-19 (Sathi Pasala)
July-2nd week
Grade 9
(19) Pythagorean Relation

- ❖ Do the activity 01 given in your textbook page number 116.
- ❖ Do the activity 01 given in your textbook page number 117.

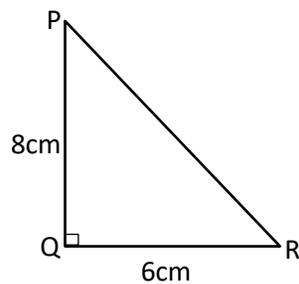

The Pythagorean relation for a right-angled triangle can be expressed as follows.

- ❖ The area of the square drawn on the hypotenuse of a right-angled triangle is equal to the sum of the areas of the squares drawn on the remaining two sides.

Accordingly,

Ex:- Find the length of PR.

According to the Pythagorean relation,

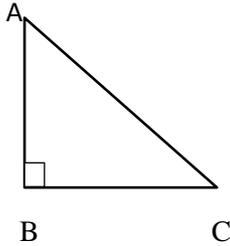

$$\begin{aligned} PR^2 &= PQ^2 + QR^2 \\ &= 8^2 + 6^2 \\ &= 64 + 36 \\ PR^2 &= 100 \\ \therefore PR &= \sqrt{100} \\ PR &= 10\text{cm} \end{aligned}$$

Do the exercise 19.1.

According to the facts you learnt in the previous week,

- ❖ The area of the square drawn on the hypotenuse of a right-angled triangle is equal to the sum of the areas of the squares drawn on the remaining two sides.

Accordingly,

$$AC^2 = AB^2 + BC^2$$

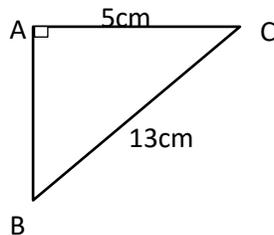

From that,

$$AB^2 = AC^2 - BC^2$$

$$BC^2 = AC^2 - AB^2 \quad \text{Can be taken.}$$

Study the following example.

Ex: - Find the length of AB.

According to the Pythagorean relation,

$$BC^2 = AB^2 + AC^2$$

$$13^2 = 5^2 + AB^2$$

$$169 = 25 + AB^2$$

$$169 - 25 = AB^2$$

$$144 = AB^2$$

$$\sqrt{144} = AB$$

$$12\text{cm} = AB$$

Now complete the exercise 19.2 by studying the examples given in the textbook.
