Let us identify the algorithm

We know the algorithm as a method of sequencing all the steps to be taken to solve a problem.

Considerations when writing an algorithm-

- When writing the algorithm the steps should be written in sequence.
- Algorithm writing must have a beginning and an end.
  - ✓ Let's look at a simple example.

Algorithm for writing and mailing a letter

- Step 1   Start
- Step 2   Take a piece of paper and a pen.
- step 3   Writing the letter.
- Step 4   Fold the letter.
- Step 5   Put the letter in the envelope.
- Step 6   Write the address on the envelope.
- Step 7   Paste the envelope.
- Step 8   Stamping
- Step 9   Put it in the mailbox
- Step 10   End.

Activity- 1

Make a fruit drink and arrange the algorithm correctly

Start	Put in jars
End	Add the ice cubes
Take the fruit	Offer
Add sugar and a pinch of salt	Wash
Blend	Put in a blender
Peel a squash, grate it and squeeze the juice
